

Table of Contents

Preface	ix
Foreword	x
Acknowledgements	xii
Feedback	xiii
SECTION 1 INTRODUCTION	1
1.1 Inequality and its Measurement	2
1.2 This Handbook	2
1.3 Core Issues Addressed by the Handbook	3
1.4 Structure of This Handbook	4
SECTION 2 MEASURING INEQUALITY BY SOCIAL CATEGORIES	9
2.1 Introduction	9
2.2 The Proposed Categories	11
2.2.1 Demographic	11
2.2.2 Socio-demographic Categories	15
2.2.3 Measures of Economic Status	21
2.2.4 Measures of Social Position	27
2.2.5 Overview of Measures	37
2.3 Features of the Social Environment that Might Lead to Inequalities	38
2.3.1 Measurement of Housing Conditions	38
2.3.2 The Urban–Rural Split and Health	42
2.3.3 Social Capital	46
SECTION 3 MEASURING INEQUALITY BY HEALTH AND DISEASE CATEGORIES (USING DATA FROM ADMINISTRATIVE SOURCES)	51
3.1 Mortality Data	51
3.2 Morbidity Data from Health Service Activity Statistics, Disease Registers and Similar Official Sources	55
3.2.1 Summary of Data Sources	56
3.3 General Practice/Primary Care Data	56
3.4 Acute Sector Data	59
3.5 Community Health Sector Data	59
SECTION 4 MEASURING INEQUALITY BY HEALTH AND DISEASE CATEGORIES (USING DATA FROM SURVEYS)	61
4.1 Health and Lifestyle Surveys	62
4.1.1 What can be Covered by a Survey?	62
4.1.2 Questions on Self-reported Health and Morbidity	62
4.1.3 Physiological Measurements and Surveys	64
4.1.4 Surveys Measuring Health Behaviours (Lifestyle) ..	65
4.2 Regular Health and Lifestyle Surveys	67

4.3	Health Status and Symptom Report Questionnaires	69
4.3.1	Introduction	69
4.3.2	Measures Concentrating on Physical Symptoms and Functioning	72
4.3.3	Measures of Mental Health and Mental Illness	74
4.3.4	Measures of Social Adjustment	75
4.3.5	Measures of Social Support	75
4.3.6	Children's Health	75
4.3.7	Measures for Older People	76
4.3.8	Questionnaires for People with Specific Conditions	76
4.3.9	Multi-Dimensional Health Status Profiles	78
4.3.10	A Single Health Rating – the Health Index	83
SECTION 5 AN INTRODUCTION TO THE USE OF INDEXES TO MEASURE DEPRIVATION		87
5.1	Background	87
5.1.1	Measuring a Multi-Dimensional Phenomenon	87
5.1.2	Presenting the Results from an Index	88
5.1.3	What to Put in an Indicator of Deprivation	88
5.1.4	Types of Data Source to Use in an Index	89
5.2	Selecting an Index of Deprivation	91
5.3	The Properties of Deprivation Indexes	91
5.3.1	Reliability	92
5.3.2	Validity	92
5.3.3	The Index Becomes the Phenomenon	94
5.4	Sources of Further Information – Reviews of Indexes and Their Properties	95
5.5	Conclusion and Summary of Key Issues Concerning Indexes of Deprivation	95
SECTION 6 A SELECTION OF INDEXES OF MULTIPLE DEPRIVATION		97
6.1	Indexes from Census or Administrative Data?	97
6.2	Census-Based Indexes	98
6.3	Indexes with a Majority of Non-Census Components	102
6.4	Geo-Classification and Other Area Classification Systems	108
SECTION 7 INDEXES: PROPERTIES AND PROBLEMS		111
7.1	Introduction	111
7.2	Measuring Disability and Limiting Illness with Indicators and Indexes	112
7.3	Key Aspects of the Construction and Structure of Indexes	114
7.4	Testing an Index	116
7.4.1	Introduction	116
7.4.2	Validity	117
7.4.3	Reliability	118
7.4.4	Responsiveness	120

7.5	The Purpose of Testing	121
7.6	Matching the Index to the Application – Example of an Index for Policy Use	121
7.7	Pitfalls and Problems of Using Indexes	122
7.7.1	Difficulties in Using an Indicator May be a Pointer to Design Problems	122
7.7.2	The Indicator Becomes the Reality	123
7.7.3	What does a ‘quality of life’ index mean?	125
7.8	Conclusions	127
SECTION 8 DATA SOURCES: AVAILABILITY AND PROBLEMS ..		129
8.1	Introduction	129
8.2	The Area Base	130
8.2.1	The Desired Base is not Always Available	130
8.2.2	Postcode to Area Translation	132
8.3	Major National Archives and Sources	133
8.4	Data Sources on Specific Topics	135
8.4.1	Population Estimates	135
8.4.2	Health	136
8.4.3	Health Surveys	138
8.4.4	Social Care	138
8.4.5	Housing	139
8.4.6	Employment and Unemployment	140
8.4.7	Environment	141
8.4.8	Crime	141
8.4.9	Education	141
8.4.10	Income and Benefits	142
8.4.11	Composite Indicators and Geo-classification Systems	142
SECTION 9 DESIGNING SURVEYS TO MEASURE INEQUALITY		143
9.1	Introduction	143
9.2	Surveys and Their Limitations	144
9.2.1	Advantages and Disadvantages	144
9.2.2	When Not to Do a Survey and the Alternatives	146
9.2.3	Doing a Survey	147
9.3	Assuming You Have Decided on a Survey	149
9.3.1	Getting Your Objectives Clear: What Do You Want to Find Out?	149
9.3.2	Research and Academic Criteria	150
9.3.3	Research Aims	150
9.4	Different Types of Survey	151
9.4.1	Cross-Sectional Studies Versus Longitudinal Surveys	151
9.4.2	Obtaining Longitudinal Data Through Health Surveys	151

9.5	Summary	153
SECTION 10 INEQUALITIES AND METHODS OF MEASUREMENT		
		155
10.1	Introduction	155
10.2	Context	155
10.3	Properties of Indexes and Measurements	157
10.4	Approaches to Summarising Inequality	158
	10.4.1 Simple Inequality Measures	158
	10.4.2 More Complicated Measures	160
10.5	Measuring Inequalities in Health Over Time	165
10.6	Summary and Conclusions: Choosing between the Measures	165
SECTION 11 CONTEXT, HISTORY AND THEORY		
		167
11.1	Introduction	167
11.2	Context	167
11.3	The Principal Theoretical Frameworks for Approaching Inequalities	169
	11.3.1 Artefactuality	169
	11.3.2 Social Selection	173
	11.3.3 Material and Structural Explanations	174
	11.3.4 Behavioural Explanations	177
	11.3.5 Income Inequality and Health Inequalities	179
	11.3.6 Inequalities in Avoidable Death	180
11.4	Summary and Conclusions	180

LIST OF TABLES

Table 2.1	Proportion reporting long-term illness by sex and by age.....	12
Table 2.2	Trends in self-reported sickness for 45–64-year-olds (1972–1998).....	12
Table 2.3	Height by sex and by age	13
Table 2.4	Distribution between light, moderate and heavy drinking of Irish compared to British	18
Table 2.5	Standardised mortality rates for groups of diseases and suicide rates	19
Table 2.6	Percentages reporting various sources of income by social class and sex.....	23
Table 2.7	Long-standing illness by car availability in household by income quintiles.....	24
Table 2.8	Long-standing illness by tenure status of household by income quintiles	26
Table 2.9	Long-standing illness by year of leaving full-time education of head of household by income quintiles .	28
Table 2.10	Percentage in each income quintile by economic status.....	32
Table 2.11	Long-standing illness by economic status of head of household by income quintiles.....	33
Table 2.12	Long-standing illness by Registrar General's occupation social class by income quintile	36
Table 2.13	Measures used to define social position.....	37
Table 2.14	The consequences of 'poor' housing circumstances for physical health.....	40
Table 2.15	Concepts used in the measurement of neighbourhood cohesion	47
Table 2.16	Impact of 'social capital' type variables.....	49
Table 4.1	Typical range of contents of a health and lifestyle survey	62
Table 4.2	Instruments for health interview surveys recommended for monitoring European Health For All indicators	63
Table 4.3	Selections of common symptoms and problems typically used in self-completion surveys	64
Table 4.4	Recommended values for body mass index (BMI) Royal College of Physicians (RCP) (1983)	65
Table 4.5	Advantages and limitations of generic measures	71
Table 4.6	Some of the more widely used multi-dimensional health profiles	79
Table 4.7	Domain coverage of some major MDPs.....	81

Table 4.8	Average life expectancy and average loss of years due to health impairments	83
Table 6.1	Components of census-based indexes	99
Table 6.2	Components of Scottish Area Deprivation Index	103
Table 6.3	Correlation of Scottish Area Deprivation Index with several census-based indexes	103
Table 6.4	Components of the IMD 2000/2004 and Welsh IMD	106
Table 7.1	Indexes and the corresponding questions	119
Table 8.1	Approximate numbers of units and populations in different area bases	131
Table 9.1	Steps to designing and executing a survey	147
Table 10.1	Age-specific annual mortality rates per 100,000 between 25 and 64 and survivors at age 65 and 85 (1960 and 1981)	159
Table 10.2	Social class and survival beyond 65. England and Wales	159
Table 10.3	Characteristics of indexes for analysing inequality	166
Table 11.1	Mortality for labourers and unskilled workers and Social Class V England and Wales (1970–1972, 1979–1980, and 1982–1983)	170
Table 11.2	Percent distributions of economically active men by occupational class 1931–1991	171
Table 11.3	Infant mortality rates for Classes I and V	172
Table 11.4	Comparisons of trends in inequality between Social Classes I and V in terms of infant mortality and survival	173
Table 11.5	The cost of the 1950 Dietary, its price index Rowntree’s subsistence income level, the equivalent subsistence income, based on the relative weight assigned to food in the RPI, and the scales of social security benefit excluding rent	178
Table 11.6	Mechanisms investigated for explaining differences in health between classes	181
